

THREE KINDS OF II-V's

FROM DIGGING DEEPER VIDEO #180

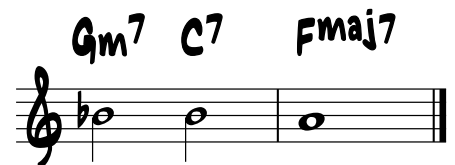

Two-five-one progressions (ii-V-I) are the harmonic backbone of the Great American Songbook, and many of the great jazz compositions we love followed that lead. In short, if you want to improvise over jazz songs, you are going to be playing a lot of ii-V-I's.

When we focus on the first chord of the progression, the ii chord, we see that there are really three different types of ii-V's to be aware of. Know what is behind these three progressions, and you'll know a huge majority of the harmonic situations that you'll run across. On the following page, you'll see that all three of these progressions are used in the chord changes to the classic Cole Porter composition "I Love You."

#1 - "Minor ii" in a ii-V-I

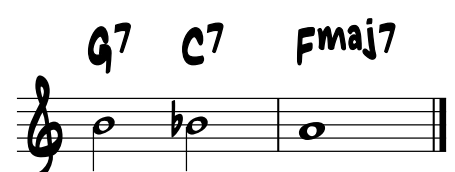

#1a - Voice Leading

#2 - "Dominant II" in a II-V-I

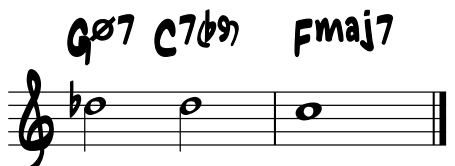

#2a - Voice Leading

#3 - "Half Diminished ii" in a ii-V-I

#3a - Voice Leading

#4 - Chord Changes to "I Love You"
