

# TIME AND CONTROL!

## FROM DIGGING DEEPER VIDEO #195

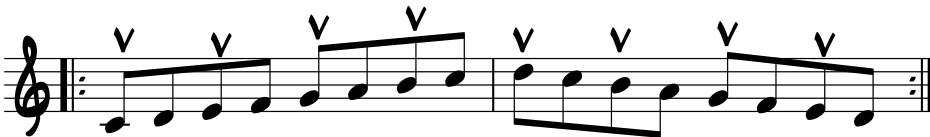

A good way to think about the importance of "sense of time" to a musician is by thinking of it as "control." I don't want my dentist to be struggling with her control of the drill she is using on me, and I would like to think that the guy with the angry looking dog coming towards me has some degree of control over his animal. A lack of control can mess things up quickly.

Further, we can think of "control" as "responsibility." You are responsible for controlling the time (possibly drills and dogs as well). Take those responsibilities seriously. Let's get to it!

#1 - One note per click, mm = 160

#2 - Two notes per click, mm = 80)

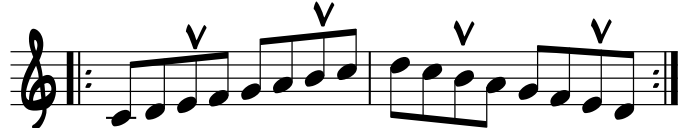

Now, we have DOUBLE the responsibility for the time. The metronome is checking in with us half as often.

#3 - Four notes per click, mm = 40

#4 - Four notes per click (2 & 4)

#5 - Eight notes per click, mm = 20

#6 - Eight notes per click, mm = 20
