

SOUND, PITCH & DRONES

FROM DIGGING DEEPER VIDEO #198

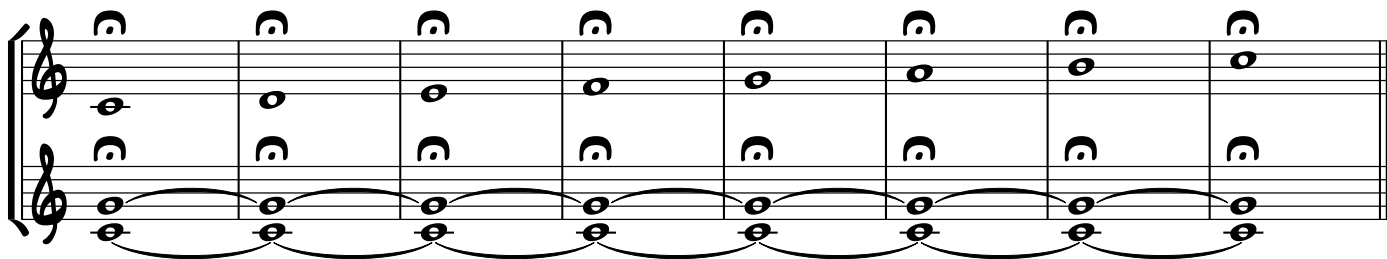

We all know that we need to play in tune, with good intonation. And we definitely know that having a full, expressive sound is central to our being perceived as less like a beginner, and more like a pro. The question is how exactly should we *work* on these aspects of our playing? Are sound and intonation even related? As many of us know, "conventional wisdom" isn't always the best way to go. It's time for some new ideas and approaches.

Using the meter, the visual part of a tuner *seems* like the obvious good way to work on our tuning. Alas, there is a deeper, more powerful and more fun way to work on our pitch and our tone, *all at the same time!* Playing with drones is going to change your timbral life!

#1 - Playing Root & 5th (against root & 5th drone)

#2 - Playing C Major scale (against root & 5th drone)

#3 - Playing C Half/Whole Diminished scale (against root & 5th drone)
