

Bebop Lines On Extended Tag Progression

"should work for a lot of tunes. Try it on Bye Bye Blackbird for instance.

Look at any tune that has a II-V-I over the last 4 bars of the tune and plug this progression I'm using in beginning 4 bars from the end to extend the tune as long as you'd like. Sonny Stitt was known for doing this very often!"

I'd recommend taking any lines that you like through multiple positions to get a better handle on memorizing them and transposing them.
