

SCALES STILL SUCK!

FROM DIGGING DEEPER VIDEO #3

Let's expand our idea of "scale-less playing" from Digging Deeper Jazz video #2 (definitely watch it and work with it if you haven't yet). There, we discovered that simple triads are amazing building blocks for professional sounding improvisations. We then amped it up by adding lower neighbor tones.

Here, we take two additions steps. In example #1 below, we add diatonic upper neighbor tones. Simply "the next note up in the scale." In example #2, we go back to the triad, but add the 7th to each triad to make 7th chords, the backbone of most jazz. Work with this material for a few hours. You won't believe how good you sound!

#1 - Triads with upper neighbors

#2 - 7th Chords/Arpeggios
