

# ENCLOSURES #1 - HALF STEP APPROACH (MAJOR)

## FROM DIGGING DEEPER VIDEO # 35

Here we are looking at a half-step approach to the notes of a major triad. Pretty boring, right? Wrong! We can actually make some real music with this device. We are going to use this device as a foundation, developing it into some pretty amazing chromatic bebop and post-bop ideas. ENCLOSURES! We have to start somewhere, and this is the place. Don't get bored or anxious, and move away from this too quickly. Get this idea of "melodic tension and release" in your ears, and under your fingers.

ATTENTION: The "lower neighbor note" is ALWAYS a 1/2 step below the chord tone, no matter what the chord says, and no matter if the note looks wrong to the chord. A "wrong note" is actually what we are after here. A TENSION. Tension is (can be) good!
