

ENCLOSURES #2 - HALF STEP APPROACH (MINOR)

FROM DIGGING DEEPER VIDEO # 36

Here we are looking at a half-step approach to the notes of a minor triad. In a previous conversation, we talked about approaching MAJOR triads. This is very much the same idea, and it is all leading into some pretty amazing chromatic bebop and post-bop ideas (enclosures!). For now, just get GREAT that this chromatic approach to the minor triad. Don't get bored or anxious, and move away from this too quickly. Get this idea of "melodic tension and release" in your ears, and under your fingers. There is a lot here!

ATTENTION: For our purposes, the "lower neighbor note" is ALWAYS a 1/2 step below the chord tone, no matter what the chord says, and no matter if the note looks wrong to the chord. A "wrong note" is actually what we are after here. A TENSION. Tension is (can be) good!

1 C Minor Triad 2 Cm7

3 Cm7 Fm7

Bbm7 Ebm7 etc...

4 Cm7 Fm7 Bbm7

Ebm7 Abm7 Dbm7 etc...
