

DOUBLE TIME PLAYING

FROM DIGGING DEEPER VIDEO #120

Double Time playing is that very fast and impressive burst of notes we hear from our jazz heroes, when they are literally playing twice as fast as the typical pace of their solo. As impressive as it is, however, the content of the double time passages is usually quite simple and understandable. The building blocks are almost always scales, arpeggios, and enclosures. Double Time licks are usually very much like "single time" licks, just faster.

Double Time Playing Is -

- Twice as fast as the typical pace of the music.
- Usually 16th notes, as opposed to 8th notes.
- Generally done at slower tempos, mm = 60 - 150.
- Played STRAIGHT. We don't swing the double time 16th notes.
- Often "figured out in advance."

#1 - Charlie Parker "single time" lick

#2 - Charlie Parker "double time" lick

#3 - Jeff's "figured out" double time lick
