

# GET HIP ON THE TONIC

## FROM DIGGING DEEPER VIDEO #143

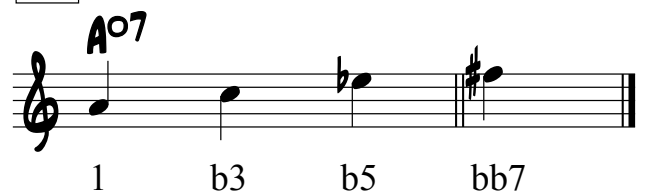

The poor tonic chord. The lonely "I" chord. It's friend the V chord, the sexy dominant chord, gets all the hip harmonic and melodic attention. Even the sub dominant minor chords get a little zest and pep on occasion, but the I chord in your ii - V - I licks? It probably gets a boring whole note. Very uncool, and very unfair.

What if there was a way to add some life to that I chord? A little mystery and tension? EVERYONE in the audience knows what's going to happen when you get there. Nothing! What if you could toy with their expectations and give them something interesting and unexpected? The Tonic Diminished Chord to the rescue.
