

MINOR PENTATONICS (ON DOMINANT)

FROM DIGGING DEEPER VIDEO #153

The Minor Pentatonic Scale is a classic sound that we all know, and have rattling around inside our heads. So many classic melodies are constructed from it. So, why not take those great Minor Pentatonic sounds we know and love, and apply them to some other harmonic situations? Let's look at applying it to Dominant chords here.

It turns out that when we find just the right spot to use it inside a dominant chords, those Minor Pentatonic notes are very close to the Altered Scale, or to a tritone substitute sound. So, why go to all the trouble of thinking Minor Pentatonic rather than just using the Altered Scale, say? Because of the MELODIC connection you have to the Minor Pentatonic. You have a melodic head start when you think "Minor Pentatonic."

#1 - The Bb Minor Pentatonic Scale

#2 - Using Bb Minor Pentatonic over G7 (dominant)

The formula is "use the Minor Pentatonic Scale built on the b3rd of the dominant chord that you want to improvise over."

#3 - In a ii-V-i progression (like Blue Bossa for instance)

Bb Minor Pentatonic
