

RECYCLED JAZZ!

FROM DIGGING DEEPER VIDEO #154

Recycling is generally considered to be good practice. Reusing things can be very efficient, and can save us time and money in the long run. The same too with jazz licks! You can reuse and recast and reposition these things to get a TON more mileage out of them. Many of your jazz heroes did this, and they want you to recycle as well.

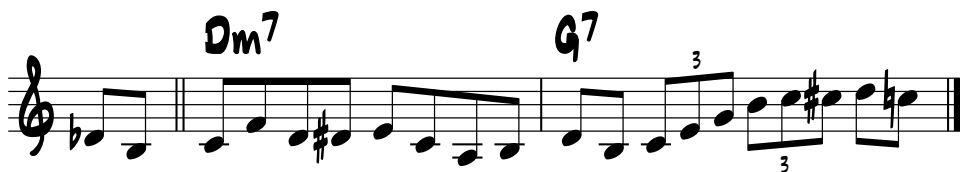

Once you know what key area the lick or melody is in, there is a decent chance that your bit of vocabulary, your lick, will fit in some other places in that key area, or on that pitch level.

#1 - Charlie Parker, over a Imaj7

Here is Bird's original lick, which he played over a I chord in a ii-V-I progression.

#2 - Over a ii-V progression

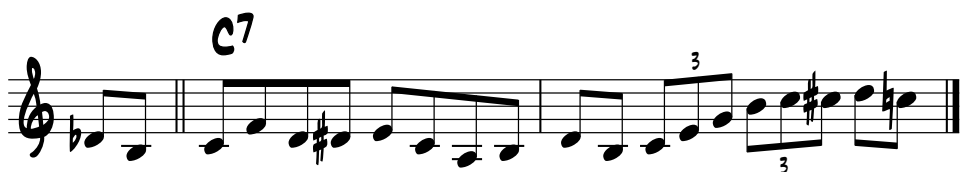

Here it is, repositioned over a ii-V-I progression in the same key of C.

#3 - Over a I -vi-ii-V progression

Here it is, repositioned over a I-vi-ii-V progression, again in the same key of C.

#4 - Over a C7

Here it is, repositioned over a C7. Now, we aren't really in the same key, but we ARE on the same pitch level of C.
