

WHICH MINOR IS IT, ANYWAY?

FROM DIGGING DEEPER VIDEO #108

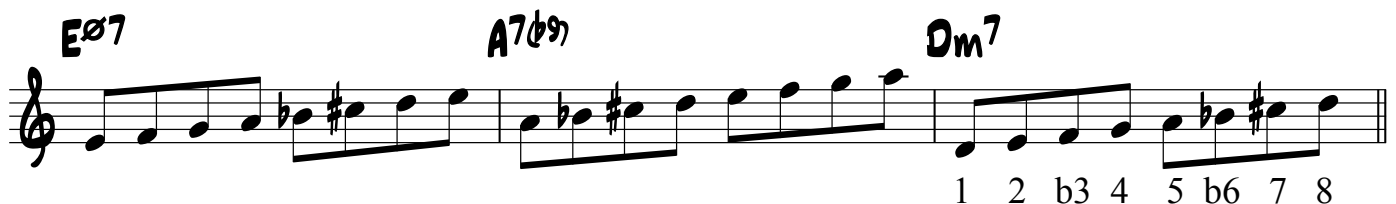

Dorian, Aeolian, Phrygian, Harmonic Minor, Natural Minor, Melodic Minor, Jazz Melodic Minor, Gypsy Minor . . . and on and on. There is a lot of confusion out there regarding minor chords and minor scales, and which to use when. It is a huge developmental moment when we realize that not every minor chord is a dorian scale (or natural minor, or whichever scale you first learned). The FUNCTION of the chord a big determiner of what scale to use.

Figuring out the FUNCTION of a given chord (in this case the minor chord) is based on first figuring out what key the chord progression is in. Once we have that, then we search for how the minor chord relates to that key. That relationship strongly suggests the scale to use.

#1 - "ii V I Progression in C Major". D Dorian Scale

#2 - "ii V i Progression in D Minor." D Harmonic Minor Scale

#3 - "I vi ii V" Progression in C Major. A Aeolian, and then D Dorian Scales
