

WEIRD PROGRESSIONS & VENN DIAGRAMS

FROM DIGGING DEEPER VIDEO #118

Successful improvising really hinges on how we connect things, this section of the song to that section, or this chord/harmony to the next one. When we can see the common threads connecting two things, we can make great connections, and great connections set us up to make great music. Connections. If you know anything about Venn Diagrams, they are all about finding the common ground. Gotta love the connections!

The Wayne Shorter song "Speak No Evil" has two seemingly unrelated chords that go back and forth at the beginning of the song. It would be easy to assume that we have to play those two chords, the Cm7 and the Dbmaj7(#11), as entirely different things.

It turns out that those two chords (and the scales implied by them) have a lot in common, as we can see in the Venn Diagram to the left. You'll notice that *six of the seven notes* in each scale are actually shared by both chords.

C minor Pentatonic Scale

#1 - Three Note Cell

#2 - Three Note Cell

#3 - Three Note Cell
