

HOW TO SOUND MODERN

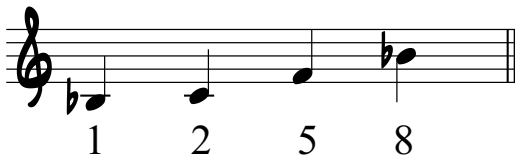

FROM DIGGING DEEPER VIDEO #87

I'm not an architect, but I pretty well know "modern architecture" when I see it. I'm not a painter either, but I can pretty easily tell a Matisse from a Vermeer. So what is going on there? Am I just really that smart? No, that is probably not it.

There is a language going on in architecture, or painting, or jazz, even if we don't have the language to describe it ourselves. We just "know it when we see it." Let's look at ONE of the many elements that can give us that "modern sound" in our composition and soloing. We can look at this approach in a number of different ways.

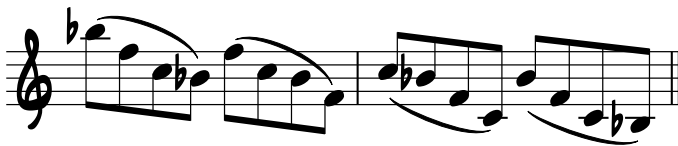

- Using wider intervals (intervals beyond a 3rd, often 4ths)
- Using repeating intervals, a symmetrical sound
- Avoiding the use of "important notes" (3rds and/or 7th)
- Using a wide range of the instrument

#1 - our starting point

This is a great "shape" or set of intervals used by Michael Brecker, and many others. A whole step, and two fourths.

#2 - groupings of four 8ths

#3 - groupings of three 8ths
