

SCARY ALTERED CHORDS

FROM DIGGING DEEPER VIDEO #93

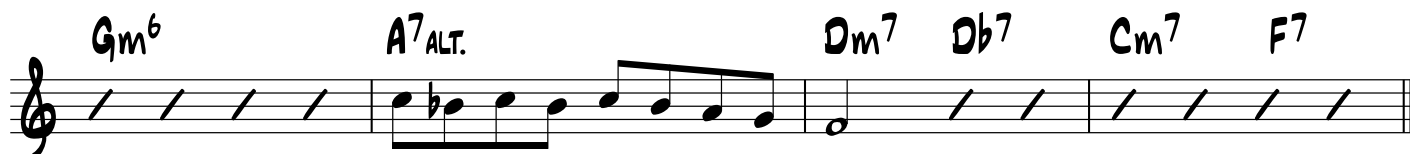

Altered chords create more confusion and angst than probably any other sound we encounter in jazz. The Altered Scale looks like Dr. Frankenstein built it, and to novice ears, it sounds like a nasty parade of wrong notes. It's easy to sound pretty unconvincing when we first begin to play over Altered tonalities. Let's fix that! Here's what you need to know . . .

- Altered chords are dominant chords. They have a major 3rd, and a flat 7th.
- They have an "altered 5th" (b5 and/or #5) and an "altered 9th" (b9 and/or #9).
- There's an Altered Scale. Get to that later. Learn an Altered MELODY or two.

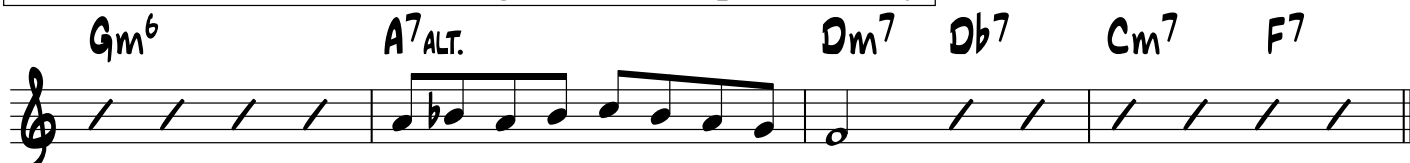

#1 - The first four measures of "Blue In Green"

#2 - Using a classic bebop lick with the "#9 and b9"

#3 - Embellish the lick, using the SAME pitches only

#4 - Embellish the lick, adding ONE new note (the good old major 3rd)
