

HARMONIC GRAVITY

FROM DIGGING DEEPER VIDEO #94

Some modern players will "turn down the gravity setting" on their harmonic sense. They'll be "playing above the chords," out of the key and seemingly chromatically and randomly, yet somehow with a sense of organization too.

The trick is to turn the Harmonic Gravity down so that we aren't 100% with the chord changes, yet to have enough Harmonic Gravity at the right time, to let the listener know "we know where we are, and everything is OK!" It's a very advanced kind of playing: it takes a highly developed sense of both melody and harmony to pull this off successfully.

#1 - Chord Tones/Bebop. Very "inside the chord changes"

#2 - Diatonic/Pentatonic/Bluesy. Less inside, more "overtop the chord changes"

#3 - Tritone subs & "alternate root motions." Further outside the chord changes

#4 - Tim Hagans solo, Harmonic Gravity turned down pretty low!
