

SLASH CHORDS - DOM7 SUS4

FROM DIGGING DEEPER VIDEO #59

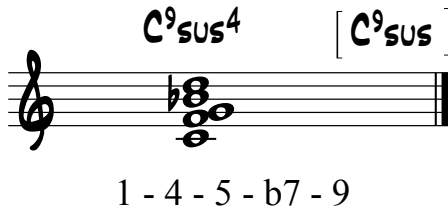

As we play more jazz and see more music, we are definitely going to run into chords that look like math equations. Sad, but true. C7/F# and Bm7/E and Db/Eb and much more. Here is one of the most common that we will see - a "minor 7 with it's fourth" in the bass. Gm7/C.

If we just pile the note up as they come, we would write the Gm7 notes (G - Bb - D - F), and then add a C in the bass.

Let's move that top F down and octave, so that it is more "inside the chord." Now, it looks a bit more recognizable. We discover a "sus4" chord. A chord with a 4th scale degree, in place of the 3rd that we normally see.

We could also write this EXACT same chord as C9sus4. It could also be written as C9sus (the 4 part of the sus4 is implied). Many times, a slash chord has another, arguably simpler name that doesn't involve the slash.

#1 - Treat the chord like it's a minor (the "left" part of the chord change)

#2 - Treat the chord like it's a dominant (relative to the bass note)
