

BURNING FAST TEMPOS!

FROM DIGGING DEEPER VIDEO #78

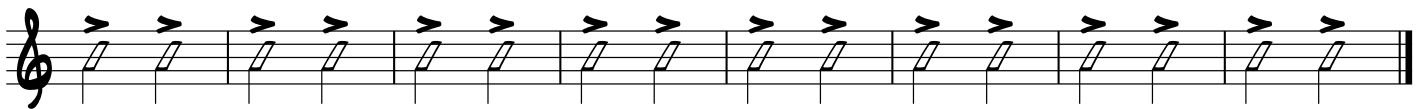

One of the problems with playing burning fast tempos, say $mm = 300$ and above, is that we confuse playing those fast tempos with wiggling our fingers really fast. They really are two different things. We usually imagine that our fingers are the problem, the bottle neck in the equation. As it turns out, it's our brains, our ability to *really hear* the tempo and *attack a single note* that is the main issue. How about if we practice *that*? It turns out that for the vast majority of us, we are able to play MUCH faster than we thought we could, with just a small amount of focused practice.

The trick is to play "Burning Whole Notes." Can you play perfect, *burning whole notes* at $mm = 300$? Most of us can't. We are late and our feel is too heavy, or we are anxious and rhythmically early, or a nasty combination of both. Learn to play burning whole notes!
